GROK BOT AUTO-REVIEW RULES · OCTOBER 2026

Ask First

20 copy-paste Ask first rules, 6 narrow Allow rules and per-bot boundaries, so your bots stop and check with you before anything risky.

Version 1.0 · October 2026

Contents

Start here: where these rules go

The 20 Ask first rules

6 narrow Allow automatically rules

Bot boundaries: paste into a bot's description

Approval card guide

Menu names and limits change. Each pack lists the official pages it relies on, so check them before you rely on a limit.

Start here: where these rules go

Grok Bot has a safety check called **Auto-review**. It looks at each action a bot is about to take, like running a command, using a connected app, or using its computer. Most actions just run. When one needs your OK, you get an approval card in the chat.

Custom Rules let you decide that for the actions you care about. There are two kinds:

- **Ask first:** the bot always stops and asks you before a matching action.
- **Allow automatically:** a matching action runs on its own, unless Auto-review finds another reason to stop it.

If both kinds match the same action, **Ask first wins**. Grok Bot's built-in safety checks always apply, whatever your rules say.

Add a rule (desktop)

1. Open **Settings → General**. Under **Bot**, make sure **Auto-review** is on. Custom Rules only show, and only work, while it's on.
2. Under **Custom Rules**, find **When Grok Bot wants to:** and paste one rule from this pack.
3. Under **It should:**, choose **Ask first** or **Allow automatically** (each rule here says which).
4. Press **Add Rule**.

On the phone, open Settings, then tap **Custom Rules** in the Bot group, and tap **Add Rule**.

Limits (from the official docs, October 2026)

- Up to **20 Ask first** rules and **20 Allow automatically** rules.
- Each rule can be up to **1,000 characters**.
- If you already have 20 Allow rules, pressing **Always allow** on a card removes your **oldest** Allow rule to make room. The card tells you which one.
- Your personal rules are saved to your account, so they apply on desktop and phone.

What rules don't cover

Auto-review doesn't review every side effect. Grok Bot's security docs name memory writes and most settings changes as examples. On an Enterprise team, admins can also add team rules that apply to your bots. Rules are one layer. Clear limits in your own requests and connecting only the apps a bot needs are the others.

How to use this pack

- **The 20 Ask first rules** exactly fill your 20 Ask first slots. You probably don't need all of them. Start with the 8 marked **Core**, then add the ones that match apps you've connected.
- **The 6 Allow rules** are examples of narrow rules that cut down on approval cards for safe, repeated work. Edit the bracketed parts first.
- **Bot boundaries** are short blocks to paste into a bot's description, so each bot knows its own limits.
- **The card guide** explains what each button on an approval card does.

What this pack isn't

Not affiliated with SpaceXSI, xAI, X or Cursor. No rule can make an AI agent perfectly safe. These rules make a bot stop and ask more often, and that's all they promise.
