Menu names and limits change. Each pack lists the official pages it relies on, so check them before you rely on a limit.

# Start here: how to use these skills

A **skill** is a saved set of instructions for how to do one task. A **routine** decides *when* a bot runs a task. This pack is about skills: the "how". Each one is a block of text you paste into a Grok Bot chat, and the bot saves it as a skill.

## Save a skill in about two minutes

1. Open a chat with any of your bots. Private skills are one library shared by all your bots, so it doesn't matter much which one.
2. Copy the block under **Paste this**. Replace everything in [BRACKETS] with your details.
3. Send it. Ask the bot to show you the saved skill so you can read it.
4. Run it once on a safe example, like an old email or a test file, and check the result before you rely on it.
5. To use it later, ask any bot for it by name: *"Use the Meeting notes to actions skill on [file]."*

If a bot says it can't find the skill: open **Connect apps** in the sidebar, select the connected count next to the title, and turn the skill on for that bot under **Private skills**.

To change a skill, ask: *"Update the [name] skill: [what to change]."* You can also open your skills from the same Connect apps screen.

## Why every skill here has six parts

Grok Bot's own docs say a useful skill states:

1. When to use it
2. Required inputs and access
3. The sequence of work
4. How to validate the result
5. What to return
6. What requires approval

Every skill in this pack follows that order, so you can see at a glance what it needs and where it stops. The last part matters most. Every skill here drafts and reports. None of them sends, posts, buys, or deletes anything without your OK.

## Skills first, routines later

The official advice is: do a task once, make it reliable, save it as a skill, and only then automate it. Once a skill works, you can schedule it: *"Every Friday at 3:00 PM, run the Weekly status report skill."* Every routine run spends usage, so schedule only the skills you really need on a timer.

## What you need

- Some skills need a connected app (email, calendar or a file location). Each one says which under **Needs**.
- A bot may need the right app or login to use a skill, even though every bot can see it.

## What this pack isn't

Not affiliated with SpaceXSI, xAI, X or Cursor. These are starting points written for Grok Bot as of October 2026. Menus change, so check the official pages listed at the end.

# The 12 skills

Each skill lists what it's good for, what it needs, the block to paste, and one tip.

---

## Skill 01: Meeting notes to actions

**Good for:** turning messy notes or a transcript into a short list of who does what.
**Needs:** the notes as a file or pasted text.

```
Save a skill called "Meeting notes to actions".
Description: Use when I give you meeting notes or a transcript and want the decisions
and action items.
1. When to use: I share notes, a transcript, or a file of either.
2. Inputs: the notes. If the meeting date or attendees are missing, ask once, then
continue without them.
3. Steps: read everything once. Pull out decisions, action items (owner + task + due
date if stated), and open questions.
4. Check: every action item must come from the notes. Never invent an owner or a
date; write "owner?" or "no date" instead.
5. Return: three short lists (Decisions, Actions, Open questions), at most 15 lines.
Offer a draft follow-up message.
6. Ask first: never send the follow-up or create tasks in any app without my OK.
```

**Tip:** add your team's names to step 2 so the bot spells them the same way every time.

---

## Skill 02: One-page research brief

**Good for:** a quick, sourced brief on a company, product, or person before a call.
**Needs:** nothing beyond web access.

```
Save a skill called "Research brief".
Description: Use when I ask for a brief, background, or quick research on a company,
product, or person.
1. When to use: I name a company, product, or public person and a reason (call,
purchase, partnership).
2. Inputs: the name and my reason. Ask once if the name is ambiguous.
3. Steps: use public sources only. Cover what they do, recent news (last 12 months),
and 3 questions worth asking.
4. Check: every fact gets a link. If you can't find a source for something, leave it
out or mark it "unverified".
5. Return: one page, at most 25 lines, links at the end of each line. Note the date
you checked.
6. Ask first: never contact the company or person, sign up for anything, or pay for a
source.
```

**Tip:** name 2 or 3 sources you trust in step 3. Fewer sites means a faster, cheaper run.

---

## Skill 03: Weekly status report

**Good for:** a Friday update for a client, boss, or yourself.
**Needs:** a folder or file of notes, or a connected calendar or email.

```
Save a skill called "Weekly status report".
Description: Use when I ask for my weekly status, update, or report.
1. When to use: I ask for this week's report, usually on Friday.
2. Inputs: [my notes file or folder] and, if connected, this week's calendar. Ask
which week if it's not the current one.
3. Steps: list what got done, what's in progress, what's blocked, and next week's top
3.
4. Check: every item must trace back to a note or calendar entry. Don't pad the list.
5. Return: a draft report of at most 12 bullet points in a file, plus a 2-line
summary in chat.
6. Ask first: never send or share the report.
```

**Tip:** once it's reliable, make it a weekly routine. That's 1 run a week.

---

## Skill 04: Reply drafter in my voice

**Good for:** first drafts of replies that sound like you.
**Needs:** a connected email account, or the email pasted in.
