GROK BOT ROUTINE RECIPES · OCTOBER 2026

Quiet Routines

15 copy-paste routines that run only as often as the job needs, and stay silent when nothing changed.

Start here: how to use these recipes

The 15 recipes

Trigger picker: pick the cheapest trigger that does the job

Fix card: when a recipe doesn't behave

The recipes

Weekday morning brief

Inbox triage, twice a day

Receipt and invoice collector (email trigger)

Price-drop watch

Back-in-stock watch

Topic watch (only new items)

Weekly review

Tomorrow's meeting prep

Waiting-on-reply nudge list

Slack helper on mention only

Slack reaction to task

Repo watch (GitHub event)

Form or app to bot (webhook)

Web page change watch

Recurring reminder that needs no browsing

Menu names and limits change. The Fix card lists the official pages these recipes rely on, so check them before you rely on a limit.

Start here: how to use these recipes

Every recipe in this pack is a routine you paste into one Grok Bot chat. The bot creates the routine for you. Each one is written to stay cheap: it runs only as often as the job needs, checks first whether anything changed, and ends silently when nothing did.

Install a recipe in about a minute

1. Open a chat with the bot that should own the routine (one bot per job is easiest to manage).
2. Copy the block under **Paste this**. Replace everything in [BRACKETS].
3. Send it. The bot sets up the routine. A new routine waits for its next scheduled time; it doesn't run when it's created.
4. Check it: on desktop, click the bot's name at the top of the chat, then find **Routines** on the **Details** tab. Open the routine and read **When to run**. It shows the saved schedule in words. If it's wrong, choose **Edit** and say what to fix.
5. Optional: press **Test** once with a safe input. Test does real work and spends usage, so do it once, not ten times.

To change a recipe later, ask the bot: *"Edit your routine: [name]. [What to change]."*

The four rules every recipe follows

1. **Slowest schedule that still works.** Most "watch" jobs don't need to run more than once or twice a day.
2. **Quiet check first.** The routine compares against a short state file it keeps. No change means no message.
3. **Short output.** At most a few lines in chat. Anything longer goes in a file, and you get the path.
4. **Drafts, not actions.** Nothing is sent, bought, posted, or deleted without your OK. Email a routine writes from your mail.grokbot.com address waits as a draft anyway (Grok Bot's own rule), and the recipes say so in writing for everything else.

Runs per week, at a glance

Schedule	Runs per week
Every 15 minutes	672
Hourly	168
Every 4 hours	42
Twice a day	14
Daily	7
Weekdays	5
Weekly	1

Runs per week isn't usage. A run that browses ten websites costs more than one that reads one inbox. But fewer runs is the single most reliable way to spend less. Grok Bot's own help says an hourly schedule, a short interval, or a Slack trigger on a busy channel "can use a week of usage in a day."

Limits worth knowing (from the official docs, October 2026)

- A bot can own up to 50 routines. Schedules must be at least five minutes apart.
- Your routines can run up to 300 times an hour in total, and each routine up to 200 times an hour. Past that, a run fails with "Automation run rate limit exceeded".
- Email triggers work on your own mail.grokbot.com address, which all your bots share. They can filter by sender or domain, not by subject.
- Slack triggers can start on a mention of the bot, a word or phrase, a reaction you add, or any message, in one channel or all of Slack.

Plans and menus change. Check the official pages linked at the end of this pack before relying on a limit.

What this pack isn't

Not affiliated with SpaceXSI, xAI, X or Cursor. No secret usage numbers: nobody outside xAI publishes how much a single run costs, and these recipes don't pretend to know.

The 15 recipes

Each recipe lists the trigger, the runs per week it creates, the block to paste, and one way to make it even cheaper.

Recipe 01: Weekday morning brief

Good for: one short summary of today, instead of several bots each pinging you.
Trigger: schedule, weekdays at one time. **Runs per week:** 5.

```
Set up a routine called "Morning brief":
- Run every weekday at [7:30 AM].
- Read today's events on my connected calendar and the unread email in my connected
inbox from the last 24 hours.
- Send me one message of at most 8 lines: today's events with times, then up to 3
emails that need a reply from me, each with one line on why.
- If there are no events and nothing needs a reply, send one line: "Quiet day."
Nothing else.
- Don't reply to, archive, or delete any email. Don't change any event.
- If my calendar or inbox can't be reached, say which one in one line instead of
guessing.
```

Make it cheaper: drop the inbox part if another routine already handles mail. One source per routine keeps each run small.

Recipe 02: Inbox triage, twice a day

Good for: knowing what needs you, without a routine that checks mail every 15 minutes (672 runs a week).
Trigger: schedule, twice a day. **Runs per week:** 14.

```
Set up a routine called "Inbox triage":
- Run every day at [9:00 AM] and [4:00 PM].
- Look only at email in my connected inbox that arrived since the last run. Keep the
time of the last run in a short state file.
- Sort each new email into: NEEDS ME, FYI, or IGNORE.
- If nothing is NEEDS ME: end the run silently. No message to me.
- If something is NEEDS ME: send at most 5 lines, one per email: sender, subject, and
what I need to do.
- You may draft replies, but never send, archive, label, or delete anything.
```
